Healthcare Payments Database Overview

The Healthcare Payments Database (HPD) serves as California's All Payer Claims Database (APCD), a research database made up of healthcare administrative data such as claims and encounters. These records are generated from transactions between payers and providers for insured individuals and collected from California plans and insurers. The Healthcare Payments Data (HPD) Measures Report uses HPD data from calendar years 2018-2023. For additional information on the health plans and insurers that submitted data to HCAI, see the HPD Snapshot Technical Note [found on the California Health and Human Services \(CalHHS\) Open Data Portal \(ODP\) page for the HPD Snapshot dashboard](#).

Visit the [HPD Program Overview Webpage](#) for more information.

Reporting Methodology

Payer Types

Payers: The companies, programs, and organizations that oversee insurance plans and reimburse healthcare providers. Three main types of payers make up the majority of the insurance market: Medicare, Medi-Cal, and commercial.

Primary payer type: Each individual is assigned to one primary payer type each year. If an individual changes payer types within a calendar year, they will be assigned to the payer type they were enrolled with the longest during that year. Individuals enrolled in multiple plans at the same time will only be assigned to the payer type that is identified as the primary payer. In cases of a discrepancy in the reported data for which payer is primary, the order of assignment is commercial payers, followed by Medicare, and then Medi-Cal. Because Medi-Cal is the payer of last resort, dual-eligible individuals will typically be assigned to the Medicare primary payer group.

Data De-Identification

The Healthcare Payments Data (HPD) Measures Report follows the California Health and Human Services Agency's Data De-Identification Guidelines. Data from any group with less than 30 individuals is removed from the analyses and suppressed in the visualizations before calculating the measures or aggregating across groups. The threshold has increased from the standard of less than 11 individuals to less than 30 due to the sensitive nature of the information presented when reporting on healthcare claims. HCAI will take a similar approach to future products built on the HPD data.

Implications: Suppression will result in some error in the reported rates, especially in counties with small populations or measures where prevalence and rates are generally lower. Use caution when interpreting results for individual counties with less than 30,000 residents.

Measure Definitions

Demographics Measures describe the characteristics of individuals represented in the data. Individuals with at least one enrollment record in a given year are included.

- **Medical Member Count:** The count of members enrolled with medical coverage during a given year. An individual with twelve months of insurance coverage counts as one member-year. For example, an individual enrolled for six months would have a value of 0.5 for this measure.
- **Pharmacy Member Count:** The count of members enrolled in pharmacy coverage during a given year. This includes coverage of costs for pharmacy services as part of medical coverage. An individual with twelve months of insurance coverage counts as one member-year. For example, an individual enrolled for six months would have a value of 0.5 for this measure.
- **Average Age:** The average age for a group of members.
- **Enrollment Rate (Commercial, Medi-Cal, Medicare):** The count of members with primary coverage provided by a payer type as a proportion of the population. Individuals enrolled in multiple plans during the year are assigned to the payer type that is deemed primary.
- **Enrollment Rate (Dual Enrollment):** The count of members who were dually enrolled in a Medicare and Medi-Cal insurance plan during the measurement year as a proportion of the population enrolled.

Health Conditions Measures are defined and identified using the criteria outlined by the Centers for Medicare & Medicaid Services (CMS) in the [Chronic Conditions Data Warehouse](#) (CCW).

- The presence of a condition is identified if an individual had one of the diagnosis codes of the corresponding CCW category appear on at least one inpatient claim/encounter OR two outpatient or professional claims/encounters in the past 24 months.

Exceptions:

- **Heart Attack (Acute Myocardial Infarction):** the relevant diagnosis codes must occur on at least one inpatient claim/encounter in the past 12 months.
- **Stroke (Transient Ischemic Attack):** the relevant diagnosis codes must appear on at least one inpatient, outpatient, or professional claim/encounter in the past 12 months.
- **Hip/Pelvic Fracture:** the relevant diagnosis codes must appear on at least one inpatient or outpatient claim/encounter in the past 12 months.
- **Obesity:** the relevant diagnosis codes must appear on at least one inpatient claim/encounter OR two non-inpatient claims/encounters in the past 24 months.

- Anxiety: the relevant diagnosis codes must appear on at least one inpatient claim/encounter OR two non-drug claims/encounters in the past 24 months.
- The All Combined Cancer Prevalence measure includes diagnosis codes for Breast Cancer, Prostate Cancer, Lung Cancer, Endometrial Cancer, Urological Cancer, Colorectal Cancer from the CCW, and diagnosis codes for Thyroid Cancer, Pancreatic Cancer, Cervical Cancer, and Bladder Cancer from the Council of State and Territorial Epidemiologists (CSTE).
- The Chronic Condition Prevalence Flag Count includes the counts of members identified as having any chronic condition during the measurement year as a proportion of the population enrolled.
- The prevalence rates of health conditions are not reported for the year 2018 because HPD does not have sufficient historical data for the two-year reference period needed to estimate those rates, with the exception of Heart Attack, Stroke, and Hip/Pelvis Fracture. These conditions are reported in 2018 because they only require a 12-month reference period.

Utilization Measures report the number of inpatient stays or Emergency Department (ED) visits identified by the criteria outlined by the National Committee for Quality Assurance's (NCQA) [Healthcare Effectiveness Data and Information Set](#) (HEDIS) guidelines, with one exception: the Potentially Avoidable ED Visit Rate is not a HEDIS measure.

- Non-acute inpatient stays are excluded from inpatient utilization rates.
- Visits by individuals using any hospice service during the given year are excluded from all utilization measure calculations.
- Utilization measures are scaled to a rate of instances per 1,000 member-years, meaning that the count of member months is divided by 1,000 and 12 (months). The unadjusted member month counts are shown in the denominator.

HEDIS Measures

- Total Inpatient Utilization Rate: The total number of inpatient discharges per 1,000 member-years.
- Maternity Inpatient Utilization Rate: The number of inpatient discharges with a maternity-related diagnosis or procedure code per 1,000 member-years.
- Surgical Inpatient Utilization Rate: The number of inpatient discharges with a surgical-related diagnosis or procedure code, excluding maternity-related stays, per 1,000 member-years.
- Medical Inpatient Utilization Rate: The number of medical inpatient discharges, excluding surgical- or maternity-related stays, per 1,000 member-years.

- **ED Visit Rate:** The number of Emergency Department (ED) visits per 1,000 member-years. This excludes visits for mental health or chemical dependency (based on diagnosis codes) and visits resulting in an inpatient stay.

Non-HEDIS Measure: The following measure was not created by HEDIS but does use the HEDIS ED Visit Rate guidelines to identify ED visits as a base.

- **Potentially Avoidable ED Visit Rate:** The number of ED visits (see ED visit definition above) that could have been prevented with access to appropriate primary or urgent care. Conditions like conjunctivitis, otitis media (ear infection), and upper respiratory infection are identified based on primary diagnosis codes. This measure was developed by the California Department of Health Care Services' (DHCS) [Statewide Collaborative Quality Improvement Project](#). The full list of ICD-10 diagnosis codes, which was produced by the Oregon Health Authority (OHA), can be viewed in Appendix A.

Los Angeles County Service Planning Areas (SPAs)

- Due to Los Angeles county's large population, the LA County Department of Public Health has divided it into eight different Service Planning Areas (SPAs) based on ZIP codes: Antelope Valley, San Fernando Valley, San Gabriel Valley, Metro, West, South, East, and South Bay. An additional insert has been added to the map to allow users to view the details for each SPA.
- Most LA SPAs cross the defined borders of the East and West Los Angeles Covered California Regions. Counts for most SPAs may be split between East and West within the data. To get the complete values for each LA SPA, include both the East and West Covered California regions when examining LA and its individual SPAs.
